

THE GROWTH OF THE HISPANIC AND LATINO/X POPULATION IN THE UNITED STATES

The Hispanic and Latino population has been one of the fastest-growing demographic groups in the United States for several decades.

According to the U.S. Census Bureau, the Hispanic population in the United States increased from approximately 22.4 million in 1990 to over 62.1 million in 2020, making up about 18.7% of the total U.S. population. This represents a significant growth rate of over 175% during that period.

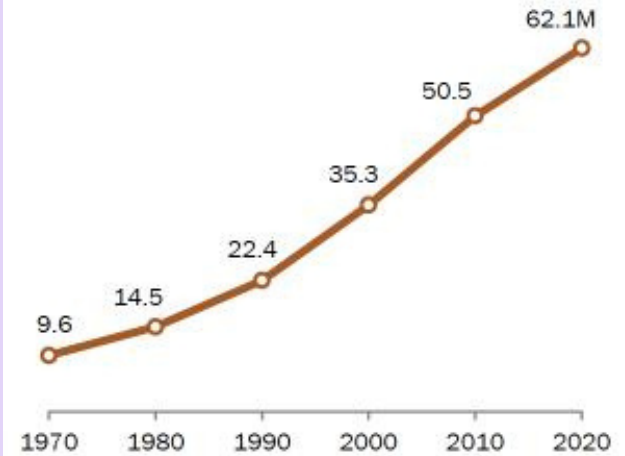

FACTORS OF GROWTH

The growth of the Hispanic and Latino/x population in the United States is primarily driven by factors such as high birth rates, immigration, and a younger age structure compared to other racial and ethnic groups. Immigration has been a significant driver of population growth within Hispanic and Latino communities. U.S.-born Hispanics: Most growth now comes from U.S.-born Hispanics rather than new immigrants.
